2-Wire Smart Home Video Intercom Systems

DMC-IQ Series

Tuya Smart and SmartLife APP Manual

How to use the two-wire video intercom app

Contents of the manual

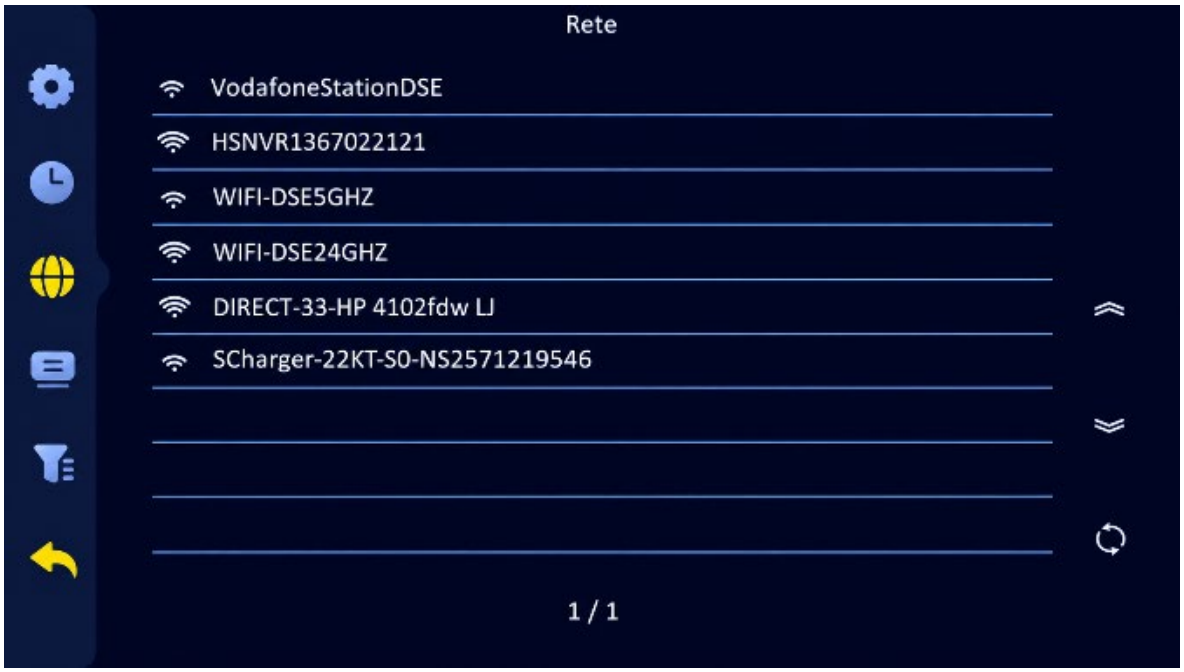
The DMC-IQ series video intercom systems can be controlled via the Internet with the Tuya Smartlife app, like all our home automation equipment (remote controls, cameras, etc.).
In this manual we explain how to use the Tuya Smartlife app for remote control.

Connect the monitor to your WiFi

To use the Smartlife app you must first connect the main monitor of your home to your Wi-Fi.
family so that it can connect to the Tuya server via the Internet for remote control.
If the intercom system serves several families, each family can create its own account
in the app and load your main monitor, so you have autonomous management
of the plant.
You can connect the monitor to your wifi during the first time setup wizard.
function. It is still possible to connect to Wi-Fi later,
in the monitor's network settings.
NOTE – Only the main monitor of each family requires connection to the wifi network. For a
good system functioning check that the main monitor has a good
Wifi coverage.

1 – Enable WLAN, then press the search button to search for Wi-Fi networks around the monitor

2 – Choose the Wi-Fi network you want to connect to and enter your login credentials. You can connect to
any Wi-Fi network, both 2.4 GHz and 5 GHz



3 – Check that the Wi-Fi icon at the top of the screen shows Wi-Fi active. Now you're ready to add your video intercom to the APP.

Download the Smartlife app

To be able to control the video intercom with your mobile phone you must first download the free app
The app**Smartlife or Tuya Smart**from Google Play or Apple Store. The two Tuya apps are
They are perfectly equivalent and differ only in aesthetics. You can use whichever you prefer.

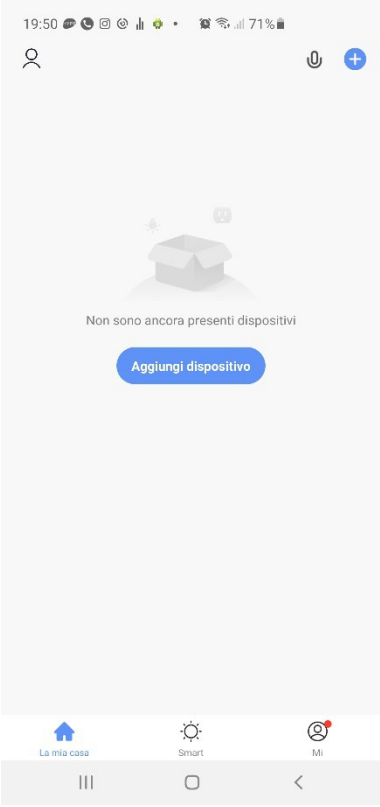
When you first start, you must create an account by entering a valid email address. Press CREATE AN NEW ACCOUNT and then wait for the code via email to confirm your registration.
If you don't have an email address you can also use your phone number by pressing Use Phone Number and get the verification code via SMS

Once you have created your account you will have your own space in the cloud where you can upload the video intercom, but also many different devices based on the Tuya system, such as ours WiFi remote controls or our WiFi cameras from this DM Series.

Connect monitor to app with auto-detection

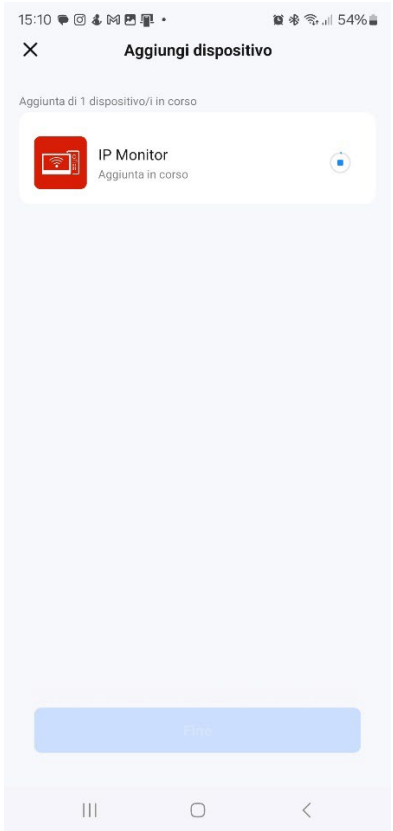
To use the video intercom with your phone, you need to load your monitor into the app.
very simple, because it happens automatically.
1 – Make sure your phone is connected to the same WiFi network you connected the
Monitor. Check your phone's Wi-Fi networks before proceeding.

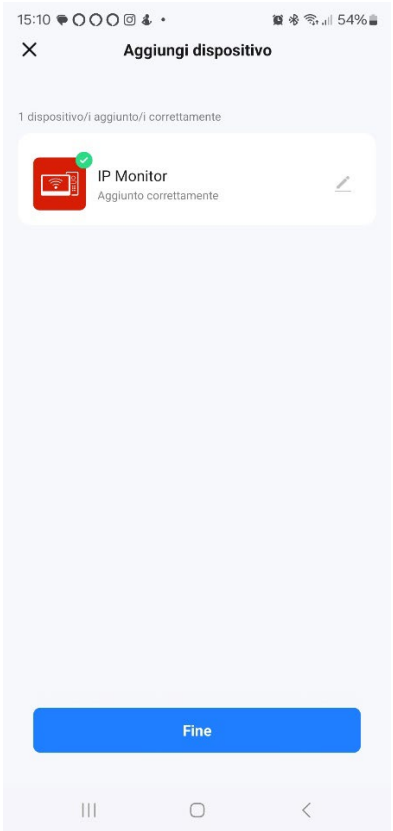
2 - Press the + button and then ADD DEVICE



3 – You don't have to do anything to charge your device because the app automatically searches for it in network. Wait for the automatic search to complete, at the end of which the
device found with the ADD button

3 – Press ADD and wait for the completion message





FINISHED!

The video intercom is now configured and ready for use.

NOTE 1

A monitor can only be linked to one Smartlife account for privacy protection.

If you use multiple phones to access your system, you don't have to configure each phone from scratch.

Instead, use the same password to log in on all your phones and you will automatically find

all your devices

NOTE 2

If you factory reset the monitor, the association with the app will be lost.

You will then need to delete the device from the app and set it up again.

MANUAL APP CONNECTION WITH QR CODE

Manual pairing with QR Code is only available for situations where the

Automatic detection fails. To use this mode, use the SCAN add-on.

QR code in the Tuya app. You can find the device's QR code in the Network Settings/UUID.

Use the video intercom with the app

Now that you have connected your system to the Smartlife app, you can control it with the app. Thanks to the P2P cloud server you can control it not only within your wifi network, but also through Internet, wherever you are.

CONNECT TO WATCH LIVE

First try connecting to your system via the app. This is something you can do in any time, even if there is no call at the door. Tap the device icon among the devices you have uploaded to SmartLife

 – Enable listening to audio through the device's microphone

 - Select the camera to view (button panel 1,2,3 or 4)

 - Enlarges the image to fill the screen

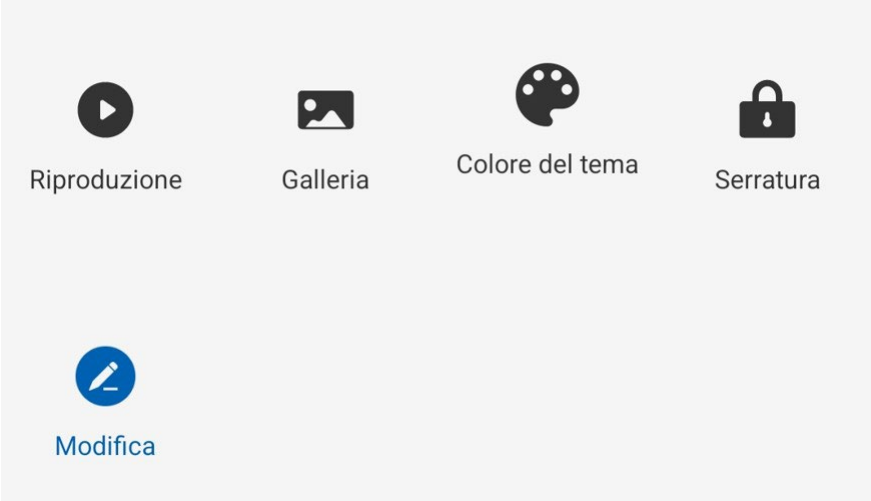
 - Switch between normal, landscape and full screen viewing

– Take a photo of the live image which is saved in the album (see below)

– By pressing this button, you can talk to anyone near the camera.

– Press to record the images you are viewing into a video that will be saved in the album

- Opens the advanced commands menu



REPRODUCTION–Allows you to play videos recorded in the SD memory inside the device searching for them by date

GALLERY–Here you can browse the photos and videos recorded with the PHOTO and REGISTRATION seen above

THEME COLOR–You can use the app in normal mode: Light Mode or in Dark Mode Mode with dark backgrounds.

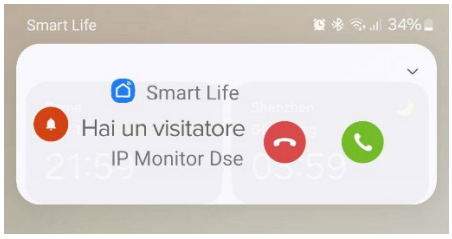
LOCK–Tap to open locks connected to the keypad

EDIT–You can bring some commands to the main screen of the app so you have them more quickly available.

GET A CALL AT THE DOOR

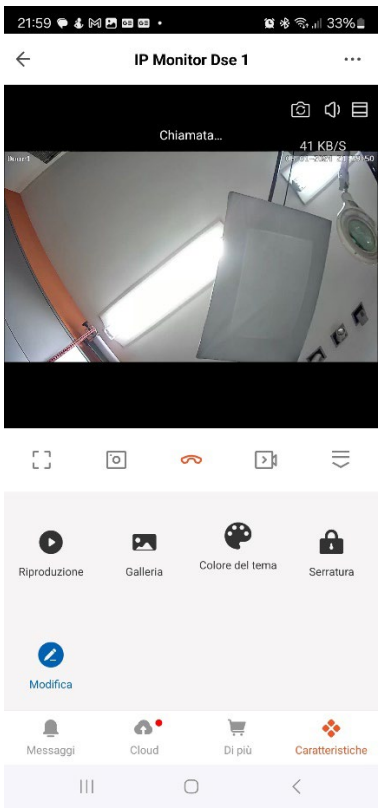
With your new system you can answer the doorbell if you are not at home, receiving a call on your phone. If the call button is pressed on the video intercom the Smartlife app installed on your smartphone will make a call sound like

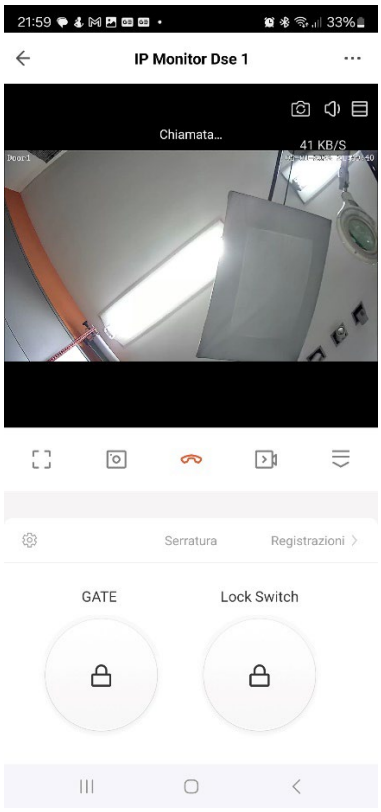
see below. Note that, unlike other products, this is not a push notification, which
It often goes unnoticed, but it simulates a real telephone call with a ringtone.
You don't need to have the app running on your phone. It will always work.



If you decide not to answer, with the red button, you will stop the communication also on the monitors
local. To answer the call, press the green button, then the telephone handset to
speak

To open the door, open the full toolbar and select LOCK. You can act on 2 buttons that
they control the 2 locks connected to the keypad.





Please note that call notification may behave differently depending on your phone.

which is received

ANDROID – Full screen call with apps running in the background / Notification at top

with apps not running

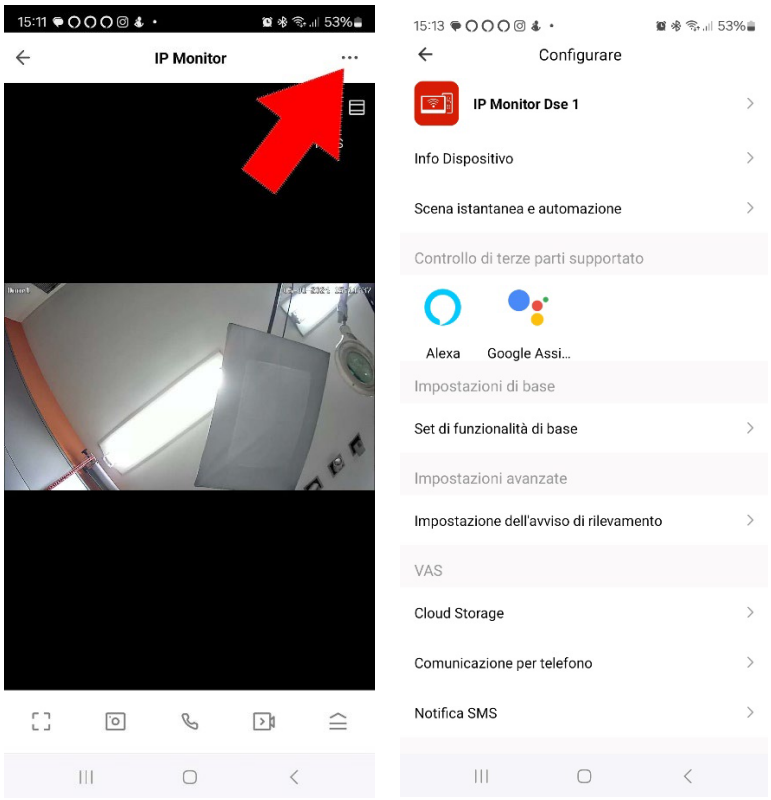
IOS – Notification Only at the Top

BACKGROUND EXECUTION

With the SmartLife app, you can receive notifications even when apps aren't running. However, if you use the app frequently, for greater ease of use it is advisable to keep the app running in background. Check on the Internet how to set an app to run in the background. depending on your mobile device.

Settings

From the device's control page you can access some advanced options by pressing the icon with the 3 dots, top right



DEVICE INFO –Show device information

INSTANT SCENE AND AUTOMATION–Indicates whether you have entered the device into a scenario by smartlive. The app allows you to set up scenarios to perform automatic actions.

THIRD PARTY CONTROL -You can connect your Smart Home devices with devices from Voice command. The cameras support the most common voice command devices such as Amazon Echo (ALEXA) and Google Assistant. In this section you'll find instructions on how to Pair your camera. Instructions for these integrations are provided later in the manual.

amazon alexa

Google Assistant

BASIC FEATURE SET –This section contains the basic settings of the system that may vary depending on the model. Normally the ROTATION is set here OF THE SCREEN, THE TIME OVERLAY.

DETECTION ALERT SETTINGS–Enable the sensitivity of the detection
movement that detects a presence in front of the device.
MEMORY CARD–This item is only available if you have inserted a card into your device.
SD memory card. Here you can check the status of the SD memory inserted in the camera with
Total, Used, and Remaining capacity. You can format the card by erasing its contents.
CLOUD STORAGE–These cameras can save recordings to Tuya cloud servers.
Here you can purchase the cloud storage service for your recordings by choosing from the
different subscription plans.
COMMUNICATION BY TELEPHONE–These devices can send push notifications to
cell phones for free. If you would also like to receive a phone call, you can do so here.
purchase the service offered by the Tuya server.
SMS NOTIFICATION–These devices can send push notifications to cell phones so
Free. If you also want to receive SMS, you can purchase the service offered by the server.
Yours.
OFFLINE NOTIFICATION–Allows you to receive a notification if the camera remains on for 30 minutes.
minutes offline (not connected to the server).

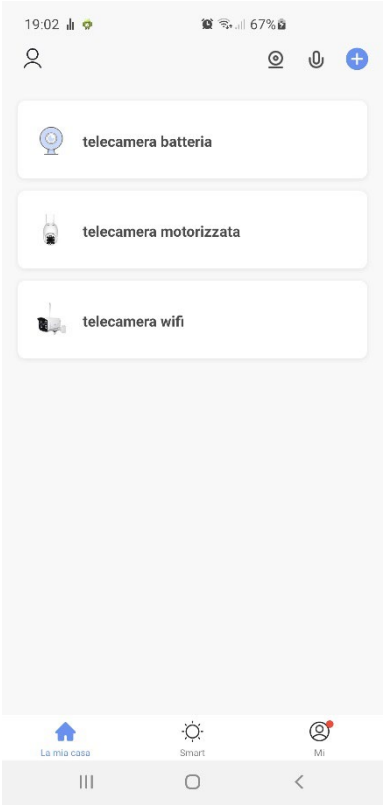
Device Management

A smart home means being able to manage your entire home from your phone. Smart Life is the ideal app.

You can add all our DM Series devices: our Smart Home cameras, our

remote controls and our doorbells and manage them all from the same app.

All your devices are in the app



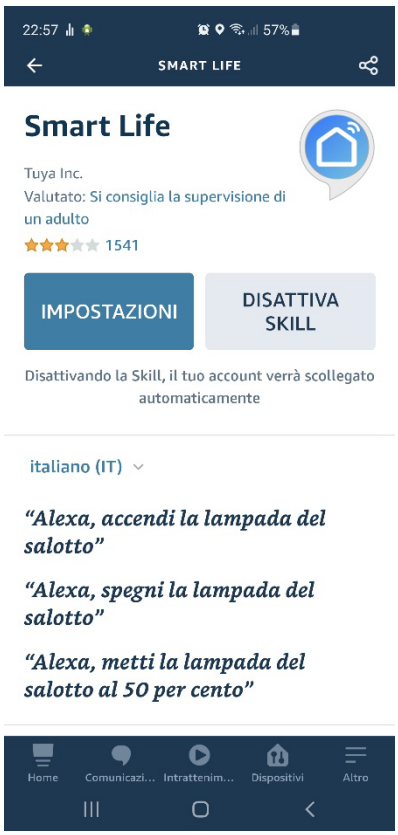
Amazon Echo Integration

Smart Life integrates seamlessly with Amazon Alexa.

Just download the**SMART LIFE skill**using the Amazon Alexa app to connect Alexa to your Smart Life account. Using the Smart Life skill, you can control all our DM Series devices.

with Alexa voice commands.

To manage the cameras with Alexa you need to purchase a device with a monitor, such as Echo Show. You can ask Alexa to show the cameras you want at any time.



Google Home Integration

Smart Life integrates seamlessly with Google Home

You need to download Google Home and connect Smart Life by entering your account credentials.

To view the cameras you then need a device suitable for viewing

Google Home, like Chromecast.
